

SPPC-II Toolkit

Mutual Support Severe Hypertension

Module 5 of 8

SCRIPT

Welcome to Module 5 of the SPPC-II Teamwork Toolkit. In this module, we will discuss the different facets of mutual support and strategies for supporting each.

Mutual Support

Mutual support involves members:

1. Assisting each other
2. Asserting and advocating for safety
3. Providing and receiving feedback
4. Managing conflict

SCRIPT

Mutual support involves the willingness and preparedness to assist other team members during operations. In addition to task assistance, mutual support also encompasses feedback, conflict management, and advocacy and assertion. These supportive behaviors are facilitated by continuous situation monitoring, which keeps teammates aware of team member and patient needs.

Task Assistance

- Team members foster a climate in which it is expected that assistance will be actively *sought* and *offered*.
 - Don't view the need for help as a weakness
- Effective teams place all offers and requests for assistance in the context of patient safety
- Team members protect each other from work overload situations
 - You can set limits

SCRIPT

Team members foster a climate in which it is expected that assistance will be actively *sought* and *offered* as a method for reducing the occurrence of error.

Ask: Which is easier? Asking for help or offering it?

Yes, offering help is generally easier than asking for it. I encourage you to make it a habit to do both.

It's important not to view help as a weakness. Medicine is getting ever more demanding and complex. We are reaching the point where it's unreasonable to expect any one individual to be able to do it all. That's why there are so many professions and specialties. Asking for help is just a normal part of getting the job done, and once you and your teams see it that way, you'll find the stigmas are no longer a barrier.

Whether you're asking for help or offering it, placing the request or offer in the context of patient safety is going to make it more compelling for whomever you're addressing.

Of course, you can protect yourself from overload by setting limits. For instance, you can say "sure, I have 5 minutes" to set a parameter before you begin.

Asserting Your Position

**Stating your opinion to other team members,
particularly when that opinion differs from the plan.**

- Best done respectfully but firmly
- Firmly assert your concerns and suggestions for doing it differently
- Include key vitals

*Tip! Assert your position using a Call-Out (see Module 3).
Tip! Use DESCRIPT script as a way to structure your assertion.*

SCRIPT

Assertion is a key element in being a good team member, even when it's sometimes difficult to do because the culture is unsupportive of speaking up or you're worried you'll be wrong. Still, it's your responsibility to state your opinion honestly to other team members, especially if you aren't agreeing with them or the care plan. Remembering that you're simply trying to start a constructive conversation that will help the team and your patients.

Your team members will be more likely to listen to you when you're respectful but back up your concerns with data, such as vital signs, and suggestions for what to do differently. Begin by opening the discussion, sharing your concern, describing the problem, offering a solution, and obtaining team agreement with how to proceed.

You can integrate your assertions under a call-out, if the opportunity is appropriate, and use the DESCRIPT script as a way to structure dissent from the group. We have already learned about call-outs in Module 3 and will be learning about the DESCRIPT script later in this module.

Next, we'll introduce two tools in this module to help you assert your position respectfully yet firmly. These include the Two-Challenge Rule and Power Words.

Two-Challenge Rule

Helpful for escalating a concern

**Asserting your position at least twice,
especially when ignored or unheard the first time.**

1. Form the first challenge as a question.
2. Provide support for your concern in the second challenge.

***Tip! Challenged team members MUST acknowledge the assertion,
otherwise escalate!***

SCRIPT

The Two-Challenge Rule is a strategy that will help you escalate a concern you have to the team. The aptly named Two-Challenge Rule is a challenge to yourself to assert your position at least twice, if initially ignored. The goal is to have the team member or team members you have challenged acknowledge your observation. Your strategy in the Two-Challenge Rule should be to form your first challenge as a question. This will naturally bring attention to your concern and encourage the teammate you've challenged to think about the situation and provide a rationale for their choices. If your question is ignored, you can frame your second challenge as a statement and provide support for your concern. The idea at this point is to explicitly explain what you're observing and why it's bothering you once again with the intent to engage your teammates in a constructive discussion.

As you have likely realized, the Two-Challenge Rule does not have to be enacted by a single individual. It is totally possible for a team member to back you up by following your challenge question with supporting concern or vice versa. If anything, providing this sort of support to a teammate will help escalate the concern more effectively, as there is often power in numbers.

Remember this is about advocating for the patient, yourself, and your team members. The Two-Challenge Rule ensures that an expressed concern has been heard, understood, and acknowledged.

There may be times when an initial assertion is ignored. If after two attempts the concern is still disregarded, but the member believes patient or staff safety is or may be severely compromised, the Two-Challenge Rule mandates taking a stronger course of action or using a supervisor or chain of command. This overcomes our natural tendency to believe the team leader must always know what he or she is doing, even when the actions taken depart from established guidelines. When invoking this rule and moving up the chain, it is essential to communicate to the entire medical team that additional input has been solicited.

It is important to have an agreed-upon approach of delivering the Two-Challenge Rule within your institution and to obtain buy-in from all involved (e.g., nurses, physicians, and administration). As with any of the tools and strategies in the SPPC-II Teamwork Toolkit, having a standardized method of delivery is critical for effectiveness. The chosen approach must be made known to all team members (i.e., everyone must be on the same page and speaking the same language).

Escalating the Concern

- If the outcome is not acceptable
 - Take a stronger course of action
 - Use supervisor or chain of command
- Empower any team member to “stop the line” if he or she senses or discovers a breach of safety
- This is an action never to be taken lightly, but it requires immediate cessation of the process and resolution of the safety concern

SCRIPT

There may be times when an initial assertion is ignored. If after two attempts the concern is still disregarded, but the team member believes patient or staff safety may be severely compromised, the Two-Challenge Rule mandates taking a stronger course of action or using a supervisor or chain of command. This overcomes our natural tendency to believe the team leader must always know what he or she is doing, even when the actions taken depart from established guidelines. When invoking this rule and moving up the chain, it is essential to communicate to the entire medical team that additional input has been solicited.

If you personally are challenged by a team member, it is your responsibility to acknowledge the concerns instead of ignoring the person. Any team member should be empowered to “stop the line” if he or she senses or discovers an essential safety breach. This is an action that should never be taken lightly but requires immediate cessation of the process to resolve the safety issue.

Power Words

aka, "CUS" Words

I am **Concerned**

I am **Uncomfortable**

This is a **Safety Issue**

SCRIPT

Power Words provide another tool for advocacy, assertion, and mutual support. If you are familiar with AHRQ's TeamSTEPPS materials, you may know these as CUS words. Signal words, such as "danger," "warning," and "caution" are common in the medical arena. They catch the reader's attention. In verbal communication, Power Words and other signal phrases have a similar effect. If all team members have a shared mental model and are on the same page, when these words are spoken, all team members will clearly understand the issue and its magnitude.

To use Power Words:

- First, state your **C**oncern.
- Then state why you are **U**ncomfortable.
- If the conflict is not resolved, state that there is a **S**afety issue. Discuss in what way the concern is related to safety. If the safety issue is not acknowledged, a supervisor should be notified.

If these words feel too strong for the present situation or are becoming a bit overused in your work setting, other phrases you could consider incorporating into your lexicon include:

- I would like some clarity about... [state the issue], and
- Would you like some assistance?

Of course, you can always find other ways to draw attention to your observations, but these Power Words are nice options for your toolkit and pair well with the second challenge when you're leveraging the Two-Challenge Rule.

Empower the Patient and Family

- Give the patient explicit permission to participate in care discussions
 - “If you hear us say something that sounds wrong or if you think we missed something that is important to you, please say something.”
- Patient Power Words
 - I am **concerned**, I am **uncomfortable**, I am worried about my **safety**
- Escalating the concern:
 - I would like it **noted in my chart...**

SCRIPT

You should also consider giving each patient and family member you care for explicit permission to participate in discussions of her care. Many patients and family members may feel deference to the experience and expertise of their care team. While you certainly have more clinical knowledge in most cases, the patient and family members will typically have a greater understanding and knowledge of their own health history and what feels normal for them. In other words, they are the experts about themselves and may know important information relevant to their case.

Patients might be instructed to use the same power words we just described. That is, you might suggest they state when they are feeling concerned, uncomfortable, or worried about their safety. Additionally, you can instruct your patients that if they are feeling unheard they can say, “I would like it noted in my chart that...”. Often, this request will get the attention of providers when other mechanisms fail.

Application to 4 Rs: Power Words & Two-Challenge Rule

4 Rs

Readiness <i>Every Unit</i>	Recognition <i>Every Patient</i>	Response <i>Every Case</i>	Reporting <i>Every Unit</i>
Ask what parameters your organization has set in the escalation plan for what to do when the Two-Challenge Rule has been used and ignored more than once	Use Power Words when early warning signs are first noticed Assert when systolic BP \geq 160 or diastolic BP \geq 110 Follow-up an ignored assertion using Two-Challenge Rule	Integrate Power Words with the Two-Challenge Rule to clarify the care plan when a provider believes patient is at risk of clinical worsening Can use together with a Call-Out (Module 3)	Use Power Words and the Two-Challenge Rule during problem-solving discussions when you have a differing opinion

SCRIPT

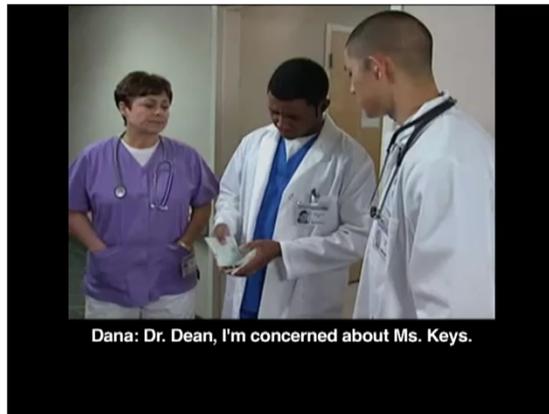

The Two-Challenge Rule and Power Words can be considered and/or leveraged at every stage in the 4 Rs framework. When working on Readiness, ask what parameter your organization has set in the escalation plan for what to do when the Two-Challenge Rule has been used and ignored more than once. If no such plans currently exist, ask what would seem appropriate in the case of severe hypertension.

In the Recognition stage, incorporate the Two-Challenge Rule and Power Words into standard response to maternal early-warning signs, including listening to and investigating patient symptoms and assessment of labs. Assert using the Two-Challenge Rule and Power Words when early-warning signs are first noticed and when systolic BP \geq 160 or diastolic BP \geq 110. Follow up, strengthening your observation with Power Words if the initial assertion is ignored or brushed off.

At the Response stage, assertive statements incorporating Power Words can be used to question the care plan when a provider believes a patient is at risk or deterioration. These might be used in conjunction with a Call-Out, which we discussed in Module 3. Key vital signs need to be included, along with protocol. It is imperative that you assert using the Two-Challenge Rule and Power Words when early warning signs are first noticed and when systolic BP \geq 160 or diastolic BP \geq 110.

Finally, in the Reporting stage, these strategies and tools may be useful during problem-solving discussions, such as debriefs, which we covered in Module 4, to communicate and resolve differing opinions.

Demonstrating Power Words

SCRIPT

Before we start, please note that this is not a severe hypertension scenario. Look out for the power words used in this example.

How was the “challenge” presented?

- In the form of a statement, *“I am concerned...”*, and then followed up with additional patient vitals.

How did she leverage Power Words?

- The nurse was uncomfortable with the late decelerations.
- She became concerned and uncomfortable that the patient’s safety may be at risk.

Practice Two-Challenge Rule

~8 minutes

- Break into groups of two or three individuals
- Brainstorm (5 minutes)
 - Imagine you are Dana from the previous video and Dr. Dean has just brushed off your assertion about Ms. Keys.
 - What would you do or say next?
- Report out (2–3 minutes)
 - Share your strategy to the group.
 - Why you think it would be (in)effective?

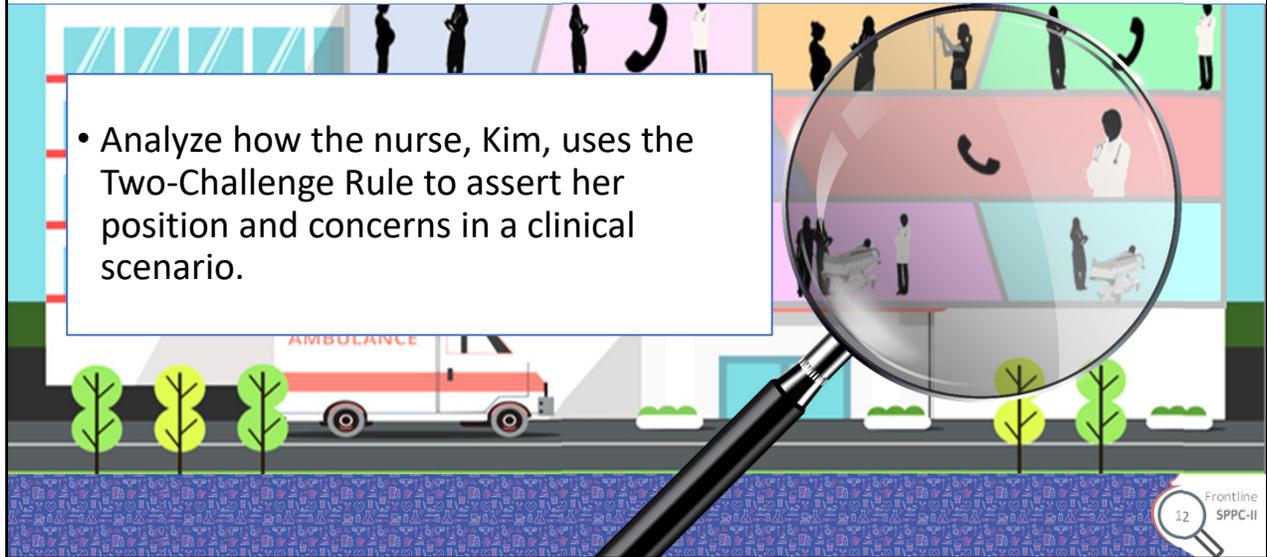

SCRIPT

Break into groups of two to three individuals.

Take no more than 5 minutes to imagine you are Dana from the previous video and Dr. Dean has just brushed off your assertion about Ms. Keys. What would you do or say next?

Would one or two teams like to share their strategy to the group? Why do you think that approach would be effective (or ineffective)?

Severe Hypertension Power Words & Two-Challenge Rule

SCRIPT

Here, we will delve into a clinical scene relating back to the severe maternal hypertension master scenario presented in the introduction module (Module 1).

In this scene, we will analyze how to use the Two-Challenge Rule to assert a position and concerns in a clinical scenario.

Severe Hypertension
Power Words & Two-Challenges

Nurse Kim calls the charge nurse, Melanie, to ask for assistance with establishing an IV...

Hi, Melanie.

Ms. Smith recently presented to L&D triage and was noted to have severe-range blood pressure.

Since arrival, she has had sustained severe-range blood pressure and I have been attempting to obtain IV access; however, I am having difficulty.

Would you be able to send someone to assist me?

Kim, triage nurse

Melanie, charge nurse

Hospital AIM
Team Leads
SPPC-II
13

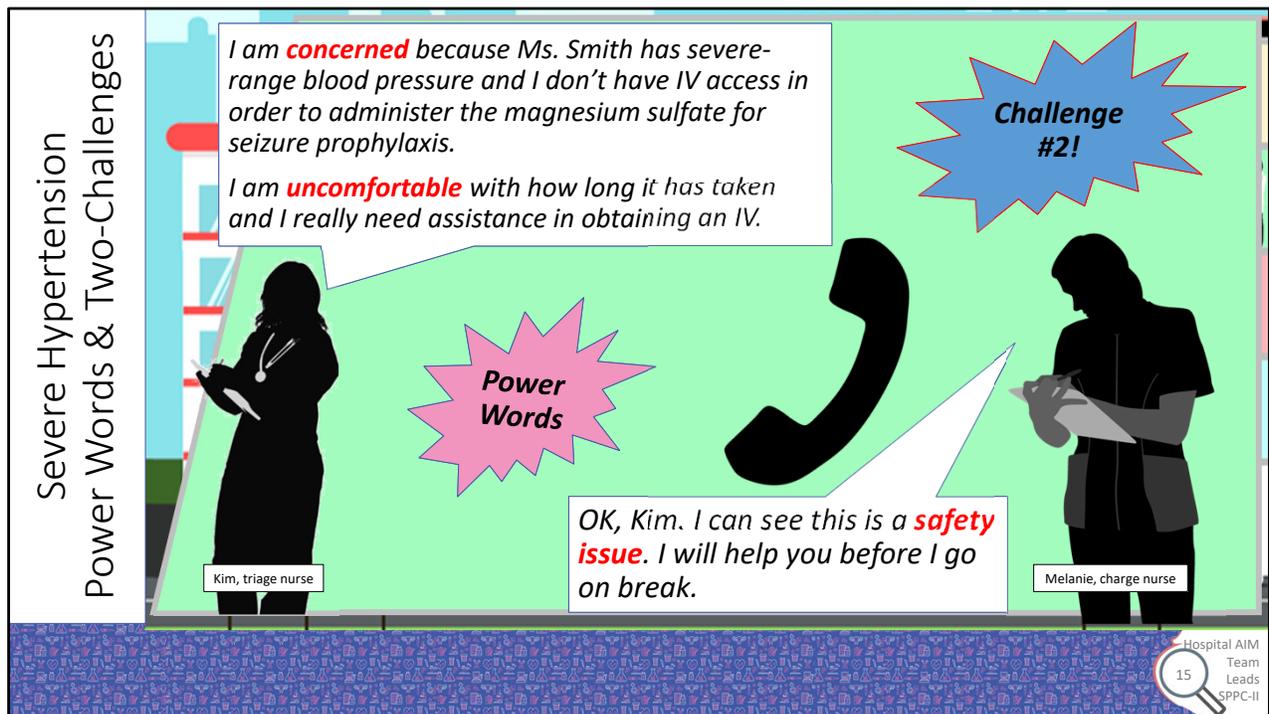

SCRIPT

Remember from the master scenario presented to you in the introduction module that Kim was having difficulty with IV placement. She calls out to the charge nurse, Melanie, for assistance: “Hi, Melanie. Ms. Smith recently presented to L&D triage and was noted to have severe range blood pressure. Since arrival, she has had sustained severe range blood pressure and I have been attempting to obtain IV access, however I am having difficulty. Would you be able to send someone to assist me?”

SCRIPT

Melanie responds, telling Kim she is short on nursing staff and getting ready to go on break, which is not the response Kim was expecting nor what she feels is clinically appropriate, so she challenges Melanie to send someone immediately. Yet, even after reasserting herself, Kim's request is not honored, which sometimes happens.

SCRIPT

Rather than taking Melanie's advice and trying a few more times, Kim employs power Power Words to assert her feelings and position in a second challenge to Melanie.

This time, it works, and Melanie agrees to stay and help.

What Is Feedback?

**Information provided for the purpose
of improving team or individual performance.**

- Professional development through
 - Reinforcing desired performance or
 - Correcting undesirable performance

SCRIPT

Another strategy to foster mutual support is feedback. Feedback is information provided for the purpose of improving individual and/or team performance. The ability to communicate self-improvement information in a useful way is an important skill in the team improvement process.

Feedback can either be given to reinforce desired performance or correct undesirable performance. Both types are helpful. Feedback can be given by any team member at any time. It is not limited to leadership roles or formal evaluation mechanisms. Effective feedback benefits the team in several ways, including:

- Fostering improvement in work performance,
- Meeting the team's and individuals' need for growth,
- Promoting better working relationships, and
- Helping the team set goals for ongoing improvement.

Can you describe a situation in which you had to give feedback to another team member? What was the situation? What was the result?

Good Feedback

- **Considerate & Respectful**
 - Everyone is human and feedback can be uncomfortable for both parties
- **Directed toward improvement**
 - Growth, not goading
- **Behavior-oriented**
 - Do not make it about personality traits
- **Specific**
 - Concrete examples
- **Timely**
 - Sooner is better

SCRIPT

Think about how it feels to receive feedback. How does good feedback feel? What about “bad” or “constructive” feedback? Not as good, right? We are all trying our best on a daily basis and many of us are already our own worst critics. Often we are already aware of our limitations, shortcomings, and mistakes. Having someone be unkind can be salt in the wound. Alternatively, if we are blissfully unaware it can be disarming to learn we have fallen short. If you find yourself in the position of giving feedback you should take care to do so with respect and consideration for the person to whom you are providing feedback. On the other hand, if you are the one receiving feedback it’s good to remember that the person who is giving you the feedback might be struggling to find the right words. It can be just as difficult to give as it is to receive feedback. Being as gentle with each other as possible, despite the discomfort of feedback, is sound advice for everyone who is part of the conversation.

Secondly, feedback should provide advice and information that is directed toward improvements that will help someone develop professionally and/or personally. As such, the topic of conversation should be about identifying ways to enhance someone’s performance so that they continue to grow as professionals and team members. To that end, feedback should focus on behavior rather than general personality traits. Doing so will not only help individuals channel their own improvement efforts to actionable changes but it will also keep the conversation constructive and help prevent hurt feelings if not embarrassment.

Furthermore, the more specific you can make feedback the better it is for the recipient. Offer up specific examples of things that drew your attention. Doing so gives you greater credibility, helps the recipient better understand how they are being perceived and what exactly it is they need to work on, and helps again to keep the message from sounding too personal. Having feedback conversations in a timely manner is going to help you provide these concrete examples. It's not always possible or appropriate to provide feedback in the moment or on the fly, but the more recent the incident the better chance you have of offering valuable insight.

Effective Feedback Demonstration

SCRIPT

This video will provide an example of a doctor providing feedback to a medical tech. Although this video doesn't showcase feedback within the context of severe hypertension in pregnancy, think about the guidelines for giving effective feedback as you watch the video.

Feedback Video Discussion

- What did you like about this demonstration?
- How would you have given feedback in this instance?
- How might feedback be different when it's of a negative or developmental nature?

SCRIPT

What did you like about how the feedback was delivered?

Some possible answers:

- Positive
- Specific
- Opportunity to share the experience
- Appears to be timely
- Directed and considerate – respectful and related to behavior

What didn't you like about how feedback was delivered?

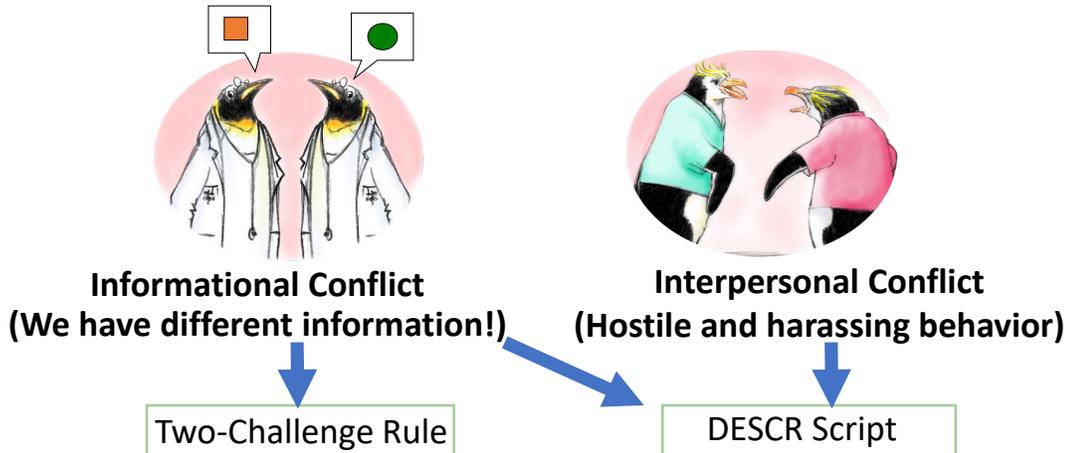

Some possible answers:

- Was public. Maybe not a bad thing with it being reinforcing feedback, but this could be touchy.
- Hard to replicate exactly what he did for next time.

Why would it be a good practice to share the experience with other team members?

- Sharing the effective communication technique with others will promote continuous learning.

Conflict in Teams

SCRIPT

Conflict can occur in teams, and it is important to know how to handle such situations when they occur. The two types of conflict we will address are informational and interpersonal.

- Informational conflict involves differing views, ideas, and opinions related to information. This is task-related and could involve disagreement about the best method to proceed with the plan of care.
- Interpersonal conflict stems from interpersonal compatibility and is not usually task related. This type of conflict tends to revolve around the team members themselves, not the actions or information. Tension, annoyance, and animosity are common, and interactions can become very argumentative.

Attempts should be made to resolve both types of conflict before they interfere with work and undermine quality and patient safety. Informational conflicts left unresolved may evolve into interpersonal conflicts in the long run and severely weaken teamwork. Disruptive behavior among staff should be actively discouraged. Organizations should develop guidelines for acceptable behaviors to assist staff in better identifying, reporting, and managing behaviors that cause disruption to patient safety. Types of disruptive behavior include condescending language or voice intonation, impatience with questions,

reluctance or refusal to answer questions or telephone calls, strong verbal abuse or threatening body language, and physical abuse.

Interpersonal conflict is best handled with the DESC script, but informational conflict might be managed by using either the Two-Challenge Rule or the DESC script.

DESCR'ibe It

A constructive approach for delivering feedback and managing conflict.

Describe the specific situation

Express your concerns about the action

Suggest alternatives

Consequences should be stated

Reach consensus and agreement

SCRIPT

The DESCR script is a useful tool for framing all sorts of different difficult communications. It is especially helpful for communicating feedback constructively and effectively managing and resolving both task and interpersonal conflicts. It can be used in minor disagreements as well as in situations involving greater conflict or consequences, such as when hostile or harassing behaviors are ongoing.

DESCR is a mnemonic for:

- D – Describing the specific situation
- E – Expressing your concerns about the action
- S – Suggesting other alternatives
- C – stating Consequences if the behavior remains unchanged, and, finally,
- R – Reaching a consensus with your teammate about how to move forward and finding agreement and compromise with a solution you both feel comfortable with.

Tips for Constructive Conversations

- Be **prepared** and have **timely** discussion in a **private** location
 - Use "I" statements; don't play the blame game
- Remain **behavior-based** and **specific**
- Keep **solution-focused**, and **directed toward improvement**
- Recognize and **listen** to the other's perspective
 - Approach the conversation with empathy and compassion
- Work on finding the **win-win**
- **Follow up**

SCRIPT

To make your conversations with the DESCR script more effective, you might want to consider:

- Having a timely discussion in a private location. If you wait too long to have the hard conversation, you will forget details and may not be as effective at conveying your stance. You might also find yourself less likely to address the underlying issue, as more time goes by. Failing to do so can have severe consequences for you, your teammates, and the patient. In cases where you fail to give constructive feedback, patients might suffer as your teammate continues to replicate the unwanted behaviors. In instances of interpersonal conflict, your relationship with your teammate may continue to degrade, making work a miserable place for you and your teammate, and again contributing to diminished patient care if your relationship deteriorates to the point that you cannot work well together.
- You will likely want privacy when you're having a conversation about your working relationship and when delivering constructive feedback that involves telling your teammate that what they are doing isn't correct or ideal. People can feel targeted and embarrassed when their mistakes are pointed out in public, and they may be less likely to listen to you and may react poorly due to feelings

of humiliation. The only time where public feedback might be okay is when it's positive reinforcement for a job well done. Not only does public commendation make the individual feel good, but it also signals to other team members what behaviors are rewarded.

- When you're dealing with interpersonal conflict or even constructive feedback, your team member will be more receptive if you frame the problems in terms of your experience and feelings to it. That reduces their defensive reactions and helps them to empathize with you better, enabling them to see the situation slightly more objectively, or at least through another person's perspective. Using "I" statements will help you underscore the point that you are simply explaining things from your perspective and want to have a productive conversation.
- Similarly, avoid blaming your team member, especially when the mistake wasn't intentional. Recognize that we are all trying to do the best we can and making mistakes is hard on us.
- Importantly, you'll want to listen to your team member's perspective and reactions just as much as you hope to be listened to. Approach the conversation with empathy and compassion for the other as much as you can. It's very difficult to receive corrective feedback or learn that a team member has a problem with your relationship. If you realize that from your end, it will help to keep the conversation in a calmer place than when negative emotions escalate.
- Relatedly, focus on what is right, not who is right. Whether you're giving feedback or managing interpersonal conflict, this point stands. If you focus on what behavior is best, it doesn't matter who is right. It's possible for both parties to be right, but if you can back your position up with clear best practice it's hard to argue. Admittedly, this point might be a bit harder to follow if the premise of the conversation is personal. In those instances, try to focus on your teammate's behavior as much as possible, avoiding criticisms of his or her character and personality.
- Work to find a win-win solution. This is where the "reaching consensus" point comes into play. I'm sure you'll have an idea of what you want to change, but be open to listening to the other and coming to a place where you are both OK with the solution. This might involve your having to make changes in your own behavior for the conflict to resolve completely.

Receiving Feedback or Managing Conflict

- Control your emotions as much as possible
 - Even when you're justified not to
- Actively listen
- Clarify the feedback you're receiving
 - *Tip! Use the check-back technique (see Module 3)*
- Demonstrate gratitude
- Sort feedback for relevancy

SCRIPT

I recognize it's never easy being on the receiving end, but if you find yourself the recipient of feedback or a conflict resolution conversation, there are a few tips you might want to consider to help the conversation go as painlessly and productively as possible. Try to control your emotions as much as possible. Sometimes the feedback giver will not be especially tactful or astute and might even say something that you may feel justified reacting to, but this will only escalate the situation. Instead, actively listen to what the giver is saying and clarify the message. If the giver is feeling particularly uncomfortable with the conversation, their points might be somewhat obscure. You can always draw on what you've learned about using the check-back technique for good communication to make sure you are understanding the point. If you aren't familiar with that technique, it involves restating the message you are given in the way you are understanding it and giving your teammate the opportunity to confirm or clarify your understanding as correct. You can learn more about it in Module 3.

After hearing what your team member has to say, either about your performance or their perspective on your interpersonal relationship, thank them for their honesty and bringing it to your attention. Once you've listened with an open mind, you can determine for yourself the relevancy and merit of the feedback you've received. This isn't a free pass to ignore all feedback you're given, but sometimes you may find yourself receiving feedback that is biased, skewed, or misinformed, and in those cases it might make sense to select applicable nuggets from the feedback and ignore other pieces.

Application to 4 Rs for Severe Hypertension

4 Rs

Readiness <i>Every Unit</i>	Recognition <i>Every Patient</i>	Response <i>Every Case</i>	Reporting <i>Every Unit</i>
N/A	N/A	Use DESC: <ul style="list-style-type: none"> To unit-standard, stage-based, OB hemorrhage emergency management plans during the care process To address conflict and offer real-time feedback. If not possible to address it in the moment, wait until after the case is completed 	Use DESC: <ul style="list-style-type: none"> To provide team-based feedback during <u>debriefs</u> or individual-level feedback during one-on-one interactions Post-case or event to manage fallout from unresolved conflicts

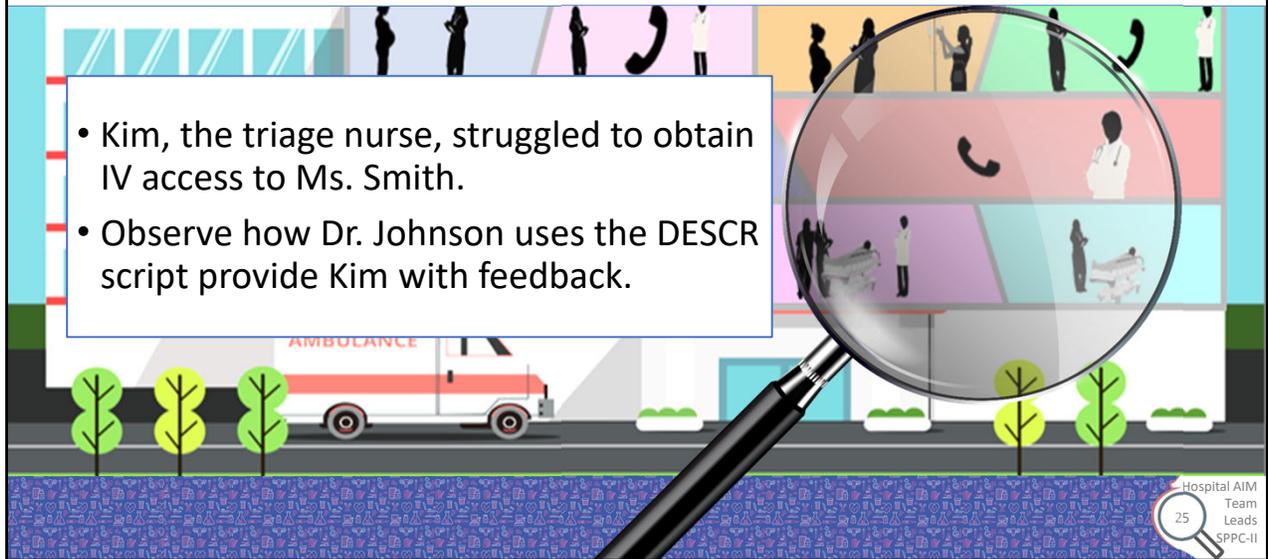

SCRIPT

Although you will likely find the DESC script useful in many situations, it is especially applicable to the Response and Reporting & Systems Learning stages of AIM's 4 Rs. It is notable to suggest that, if conflict and feedback cannot be proffered real-time in the moment, it's best to wait until after the case is completed. Just use common sense and remember our tips for holding constructive conversations.

Finally, DESC is a great tool to help reinforce and establish a culture of huddles for high-risk patients and post-event debriefs. Use DESC to provide feedback during debriefs or in one-on-one interactions between providers post-event and manage fallout from unresolved conflicts.

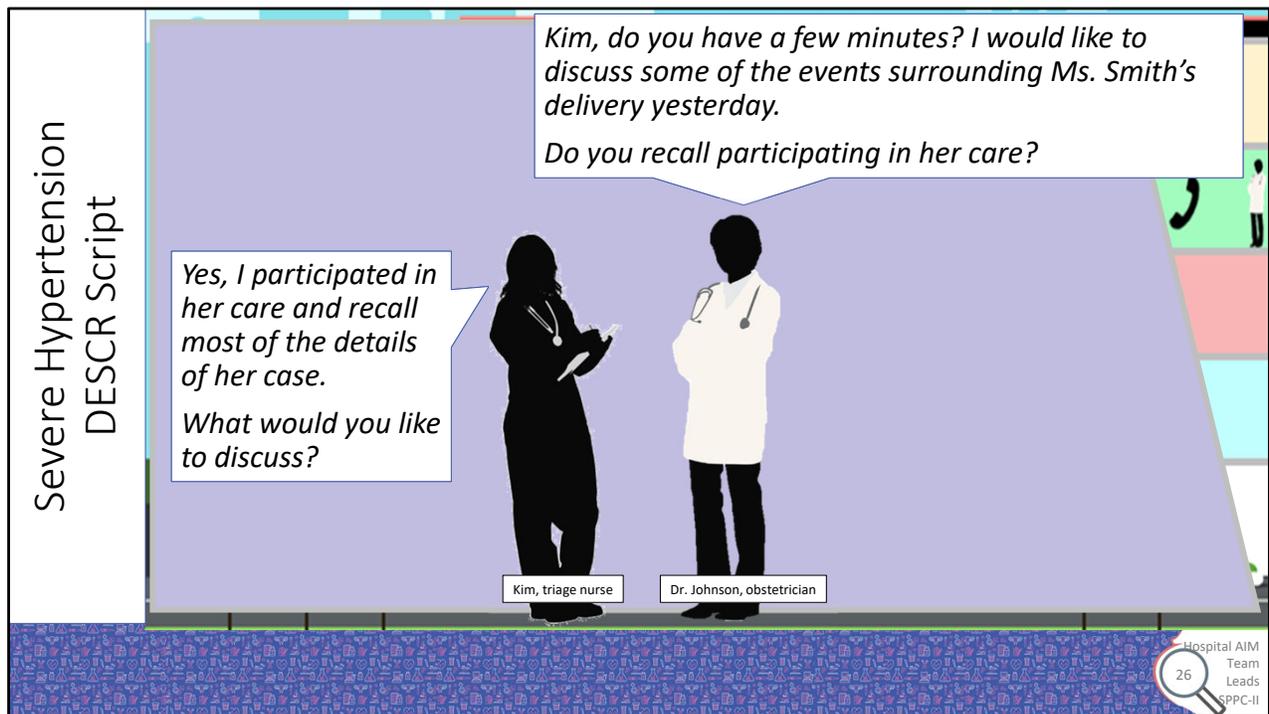

Severe Hypertension DESCR Script

SCRIPT

We will now build from the severe hypertension case scenario presented in Module 1. If you recall, Ms. Alice Smith presented with severe hypertension and her nurse, Kim, struggled to obtain IV access.

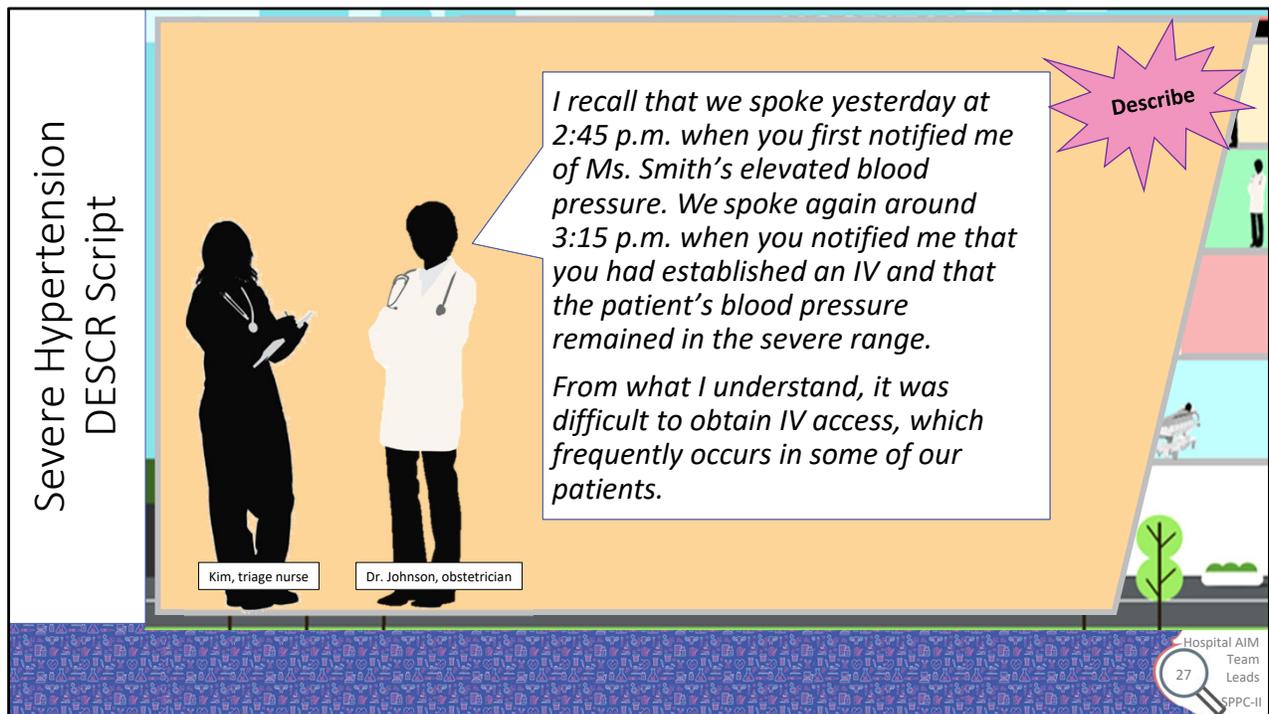

Observe how Dr. Johnson uses the DESCR script to give Kim feedback.

SCRIPT

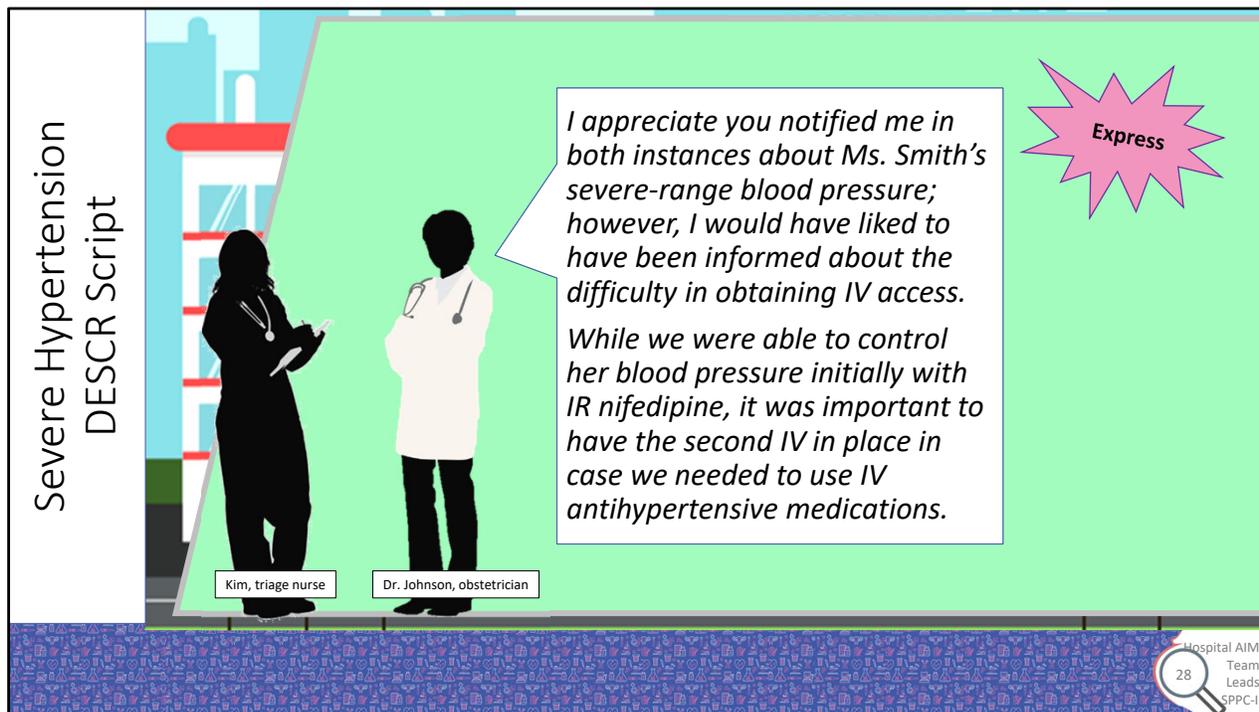

Dr. Johnson, the obstetrician, opens the conversation by saying, “Kim, do you have a few minutes? I would like to discuss some of the events surrounding Ms. Smith’s delivery yesterday. Do you recall participating in her care?”

Kim confirms her participation and asks what Dr. Johnson would like to discuss.

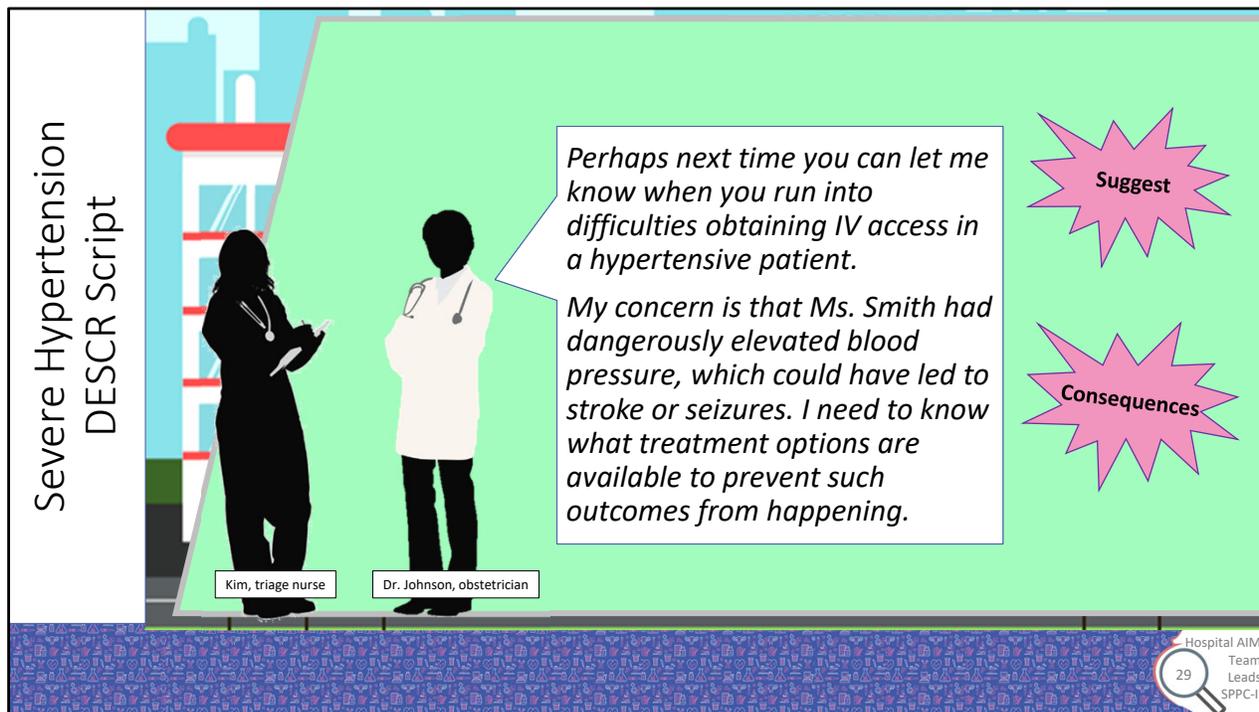

SCRIPT

Dr. Johnson begins by describing the situation as she remembers it. She says, “I recall that we spoke yesterday at 2:45 p.m. when you first notified me of Ms. Smith’s elevated blood pressure. We spoke again around 3:15 p.m. when you notified me that you had established an IV and that the patient’s blood pressure remained in the severe range. From what I understand, it was difficult to obtain IV access, which frequently occurs in some of our patients.”

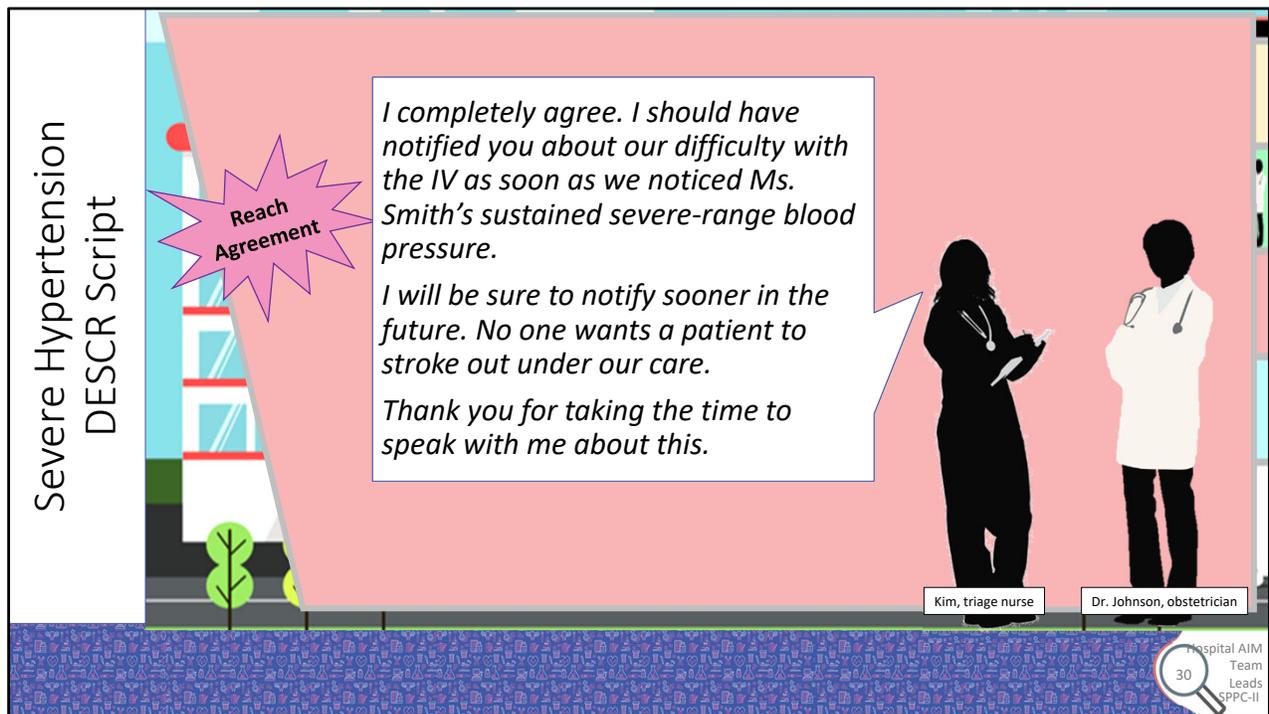

SCRIPT

Dr. Johnson expresses her appreciation that Kim kept her informed about Ms. Smith's severe-range blood pressure but admits she would like to have also known about the difficulty in obtaining IV access. Dr. Johnson's reasoning is that although "we were able to control Ms. Smith's blood pressure initially with IR nifedipine, it was important to have the second IV in place in case we needed to use IV antihypertensive medications."

SCRIPT

Dr. Johnson suggests that next time Kim should let her know when she runs into difficulties obtaining IV access in a hypertensive patient. She reasons that because dangerously elevated blood pressure can lead to stroke or seizures she needs to know what treatment options are available to prevent such adverse consequences.

SCRIPT

Kim agrees with everything Dr. Johnson has shared. She says, “I should have notified you about our difficulty with the IV as soon as we noticed Ms. Smith’s sustained severe-range blood pressure. I will be sure to notify sooner in the future. No one wants a patient to stroke out under our care. Thank you for taking the time to speak with me about this.”

SCRIPT

Dr. Johnson thanks Kim for her care and provides some additional reinforcing feedback.

Practice DESC

~10 minutes

- Find a partner.
- Imagine again that you are Dana and Dr. Dean has ignored your assertion about Ms. Keys and you were forced to escalate the concern.
- Imagine your partner is Dr. Dean.
- Use the DESC script to frame what you would like to say to Dr. Dean.
- Your partner can use DESC to give you feedback on your approach.

Alternatively:

Think of a recent conflict you've experienced and use the DESC script to address it with your partner.

SCRIPT

For this exercise find a partner. One of you act as Dana and the other as Dr. Dean.

Imagine that you are Dana from the video, and Dr. Dean has ignored your assertion about Ms. Keys and you were forced to escalate your concern.

The partner playing Dana should use the DESC script to frame what you would say to Dr. Dean. The partner playing Dr. Dean might provide feedback on partner Dana's use of DESC.

If you're feeling open enough, you can alternatively think of a recent conflict you've had with somebody. It doesn't have to be work-related, but it can be. It can also be as serious or minor or personal as you are comfortable sharing. Imagine your partner is that person, be it your teenage child, spouse, or coworker.

Take no more than 10 minutes to complete this activity.

Summary

- There are a number of ways to show team members support:
 - Task assistance
 - Feedback
 - Respectful conflict management
 - Asserting and advocating for teammates, patients, and yourself
- Strategies:
 - Two-Challenge Rule
 - Power Words
 - DESC script.

SCRIPT

Mutual support is the heart of teamwork. It goes beyond simple task assistance to include giving constructive feedback, resolving conflict respectfully, and asserting and advocating for your patients, teammates, and yourself.

To help you navigate these interactions, you can adopt the Two-Challenge Rule in your home institutions to empower staff to speak up. Pair this with power words for extra effect. Finally, the DESC script is a great tool for framing difficult conversations, especially those involving delivering constructive feedback or managing disagreements.

Acknowledgements

- This project is funded and implemented by the Agency for Healthcare Research and Quality and the Johns Hopkins University Contract Number HHSP233201500020I in collaboration with the Health Resources and Services Administration and the Alliance for Innovation on Maternal Health.
